Book

Personal

Search

(You can click on "personal" to switch to "business", where event-related availability will be shown, additionally. Also, if not specifying any conditions below, click on search will show all the availability)

Destination

Time

Rooms & Guests

(Click to show a dropdown table, with available options shown. When the condition is determined, the icon on this page will be darker and other conditions will change coorespondingly according to availability. This will be realized through adding more "WHERE" constraints in the SQL query)

Signature Accommodations

Discover designed spaces tailored for your ultimate comfort and rest.

Executive Meeting Spaces

State-of-the-art facilities equipped to empower your professional events.

Backend Infrastructure

Core service operations seamlessly supported by SQLite backend.

(When icon moved to each label, it will expand to show detailed information of each item)

Search

Hotel Dashboard

Current Guest

Active Events

Room Availability

(The dashboard will display query results based on the search conditions above. "Current Guest" comes from reservation-related records, "Active Events" from event records, and "Room Availability" from room status records. These sections are generated using SQL SELECT queries with WHERE filters and JOINS across related tables.)

Guest Billing

Guest Info

Name:
ID:
Phone Number:
Email Address:
Reservation ID:

Assigned Room Number:

Total Bill: xxx \$

Charge Details

(This page will show how the database supports the Billing / Guest View.
Guest information, charge details, and total bill amount are retrieved from
related records through SQL queries using filtering conditions and table joins.)
